khalifa Husain Jusab (Age:- 51 years) Village:- Koday (Mandvi -Kutch)

In January-2007 when I was going by bicycle on the way I suddenly felt giddiness , hesitation in speaking and my right hand was paralyzed . I couldn't hold bicycle. I came home by autoriksha

Then I took Ayurvedic treatment from Lakhapar village I got slight relief in my hand. Suddenly on one morning in July 2007 I couldn't get up from my bed due to sudden paralysis in my right hand and right leg . I even was unable to speak properly. Then we came Bhuj for treatment. My brain CT-Scan done at Leva- Patel hospital on date 12-7-2007 showed an area of reduced blood supply in left side of brain –size was 8mm (old infarction)

I started allopathic treatment from there Since 2009 I took that treatment but I got no relief I was fully on bed Even on bed I couldn't get up without help of other In March 2010 I started Dr. Aminaben khatri's Ayurvedic treatment. Gradually sense recovered in my right hand and right leg I can got up from bed on my own and speak easily.

After one month of her treatment I can walk with the help of stick
The follow up CT-Scan of my brain done after her treatment on date 20-4-201showed
multiple tiny areas of reduced blood supply on both sides of brain (Lacunars –infarcts)

CT SCAN BRAIN (PLAIN STUDY)

PROTOCOL:

Plain study performed, 10 mm contiguous serial sections taken from base of skull to vertex. Thinner sections taken from posterior fossa.

OBSERVATION:

There is presence of small low attenuation hypodense area (CT density of 21 HU, size 8 mm) seen in Left side Basal ganglia and also involving left side centrum semiovale region.

P/o Area of Old Infarction appear more likely.

No significant mass effect or midline shift seen.

No definite evidence of mass lesion seen.

No evidence of intracranial hemorrhage on plain study.

Both lateral and third ventricles are unremarkable.

Brain stem region appears normal.

Posterior fossa and fourth ventricle appear normal.

Skull vault is unremarkable.

CONCLUSION

*Suggested clinical correlation and further investigations.

CT SCAN OF BRAIN (PLAIN STUDY)

PROTOCOL: Plain study performed, 10 mm contiguous serial sections taken from base of skull to vertex. Thinner sections taken from posterior fossa.

OBSERVATION:

Multiple lacunar infarcts noted in lef lentiform nucleus, left midbrain, right external capsule and left centrum semi ovale.

No evidence of mass lesion seen.

No evidence of edema, mass effect or midline shift seen.

No evidence of intracranial hemorrhage seen.

Both lateral and third ventricles appear normal.

Brain stem region appears normal.

Basal cisterns appear normal.

Posterior fossa and fourth ventricle appear normal.

Skull vault is unremarkable.

CONCLUSION:

- * Multiple lacunar infarcts noted in lef lentiform nucleus, right external capsule and left centrum semi ovale.
- * No evidence of intracranial hemorrhage seen on plain CT brain study.

Please correlate clinically and investigate further. Thanks for reference.
